

Home Exam Information

The home exam is composed of two different parts: one that is mandatory, and one that you can choose to complete if you are aiming for a higher grade.

You have one work day at your disposal to write the home exam: between 8-17 on Friday, June 4. **The "Home Exam" assignment page will become available at 8:00 on the exam's scheduled day.** We estimate the amount of time needed to complete it to 4 hours (2 hours for the mandatory part, and 2 hours for the optional part).

If you have followed the lectures, taken active part in the group assignment and read the required literature, you will manage.

The assessment of the home exam will be on a holistic level. In other words: if you know a lot about one specific domain or process and a bit less about other sectors and processes, you can still pass - but you need to have a good grasp of most of the things in the list below. To pass the home exam you need to show that you are able to:

- describe the challenges and problems that arise in connection with the development and implementation of IT systems in large organizations, and methods to deal with these;
- describe the challenges and problems that occur during procurement or development of systems intended for different user groups, and methods to deal with these;
- discuss advantages, disadvantages and applicability of a method in a specified problem situation;
- propose appropriate solutions for a given IT problem situation and motivate and discuss the solution(s);
- present and discuss course contents verbally and in writing with proficiency appropriate to the level of education.
