C Instructions DBII

Uppsala University

Department of Information Technology

Database Design II (1DL400) - 2023-01-09

Instructions: Read through the complete exam and note below any unclear directives before you start solving the questions. Answer **all** questions.

The paper has two types of questions:

- If a question is marked with ♥ you must select ALL correct choices. If you do not select
 all correct choices or you include any incorrect choice, your answer will be marked as
 incorrect.
- For all other questions you must select only one choice even if there are several correct choices. Your answer will be marked as correct if you select any of the correct choices. If you select an incorrect choice or select more than one choice, your answer will be marked as incorrect.

Please also answer questions: ♣ Q1, Q2 and Q3 which can be useful to us.

Grading. For each correct answer, you gain 1 point. A wrong answer does not generate negative points.

To achieve a grade of 3, you must gain at least 14 points in the whole exam. To achieve a grade of 4, you must gain at least 17 points in the whole exam. To achieve a grade of 5, you must collect at least 21 points in the whole exam.

If you find any unclear directives, please note the question below and explain what you think is unclear.		

¹ A C Question G1: When

	To Question GT. When	
	General questions (useful for us)	
	When have you attended the course?	
	Select one alternative (no points awarded for this question):	
	O 2022	
	O 2021	
	○ 2020	
	○ Before 2020	
	Maximum marks	: C
2	♣ C Question G2: How many	
	General questions (useful for us)	
	How many lectures have you attended?	
	Select one alternative (no points awarded for this question):	
	O None or very few	
	O Around 25%	
	○ Around 50%	
	○ Around 75%	
	○ Almost all	

³ ♣ C Question G3: Study program

General questions (useful for us)				
What is your study program? Select one alternative (no points awarded for this question):				
○ F				
O STS				
O CS				
\circ X				
O IT				
None of the previous answers				
	Maximum marks: 0			

⁴ C Joins size

Select one alternative:

Consider the relations r1(A, B, C), r2(B, D, E) and r3(C,E,F), with primary keys A, B, C respectively. B and C are foreign keys accordingly. Assume that r1 has 3,000 tuples, r2 has 2,500 tuples, r3 has 500 tuples.

What is the estimated size of r1 ⋈ r2 ⋈ r3?

3,000+2,500+500.		
3,000*2,500*500.		
3,000*(2,500+500).		
2,500.		
2,500*500 .		
O 500.		
3,000 .		

⁵ ♥ C Joins

Let relations **r1(A, B, C)** and **r2(C, D, E)** have the following properties: **r1** has 20,000 tuples, **r2** has 45,000 tuples; 25 tuples of **r1** fit on one block, and 30 tuples of **r2** fit on one block. Consider that we want to join **r1** and **r2** using the **nested-loop join** algorithm, which of the following is/are true:

Select one or more alternatives:

In the worst case (e.g., the two relations cannot fit in memory), the most efficient application of the algorithm will require 1,500*800 +800 block transfers.
In the best case (e.g. both relations can fit in memory), the most efficient application of the algorithm will require 800 +1,500 block transfers.
In the case where at least one relation can fit in memory, the most efficient application of the algorithm will require 800 +1,500 block transfers.
In the worst case (e.g., the two relations cannot fit in memory), the most efficient application of the algorithm will require 1,500+800 block transfers.
In the best case (e.g. both relations can fit in memory), the most efficient application of the algorithm will require 1,500*800 +800 block transfers.
In the worst case (e.g., the two relations cannot fit in memory), the most efficient application of the algorithm will require 800 +20,000*1,500 block transfers.

Considering the following transactions and schedules, answer the following questions.

T_1	T ₂	T_1	T ₂
read(A) A := A - 50 write(A) read(B) B := B + 50 write(B) commit	read(A) temp := A * 0.1 A := A - temp write(A) read(B) B := B + temp write(B) commit	$\begin{aligned} & \operatorname{read}(A) \\ & A := A - 50 \\ & \operatorname{write}(A) \\ & \operatorname{read}(B) \\ & B := B + 50 \\ & \operatorname{write}(B) \\ & \operatorname{commit} \end{aligned}$	read(A) temp := A * 0.1 A := A - temp write(A) read(B) B := B + temp write(B) commit

Schedule A

Schedule B

T_1	T_2	T_1	T ₂
read(A) A := A - 50		read(A) $A := A - 50$	
write(A)	read(A) temp := A * 0.1 A := A - temp write(A)		read(A) temp := A * 0. A := A - temp write(A) read(B)
read(B) $B := B + 50$ write(B) commit	read(B)	write(A) read(B) B := B + 50 write(B) commit	
	B := B + temp write(B) commit	SSIMINE	B := B + temp write(B) commit

Schedule D

⁶ ♥ C Transactions

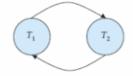

Consider the two serial schedules A and B. Which of the following are correct?

Select one or more alternatives:	
☐ Schedule C is serializable to Schedule B	
☐ Schedule D is serializable to Schedule A	
☐ Schedule C is serializable to Schedule A	
☐ Schedule C suffers from the lost update problem.	
☐ Schedule D is serializable to Schedule B	
☐ Schedule D suffers from the lost update problem.	
	Maximum marks: 1

⁷ C Transactions

Considering the following Precedence graphs, which of the following is true?

Precedence Graph A1

Precedence Graph B1

Select one alternative:

- None of the other answers is correct!
- Precedence graph A1 corresponds to Schedule D.
- Precedence graph B1 corresponds to Schedule D.
- Precedence graph A1 corresponds to Schedule A, B and C.

8 ♥ C Serializability

For the following sets of transactions T_1 , T_2 , and T_3 , which of the schedules are (conflict) serializable?:

♥ Select one or more alternatives:

T1	T2	Т3
read_item(A);		
A_:= A * 5;		
write_item(A);		
	read_item(A);	
read_item(B);		
B;= B − 10;		
write_item(B);		
	A := A + 10	
		read_item(C);
		C;= C / 10;
		write_item(C)
	write_item(A);	
		read_item(A)
		A;= A / 5;
		write_item(A)

T1	T2	T3
	read_item(A);	
	A := A + 10	
		read_item(C);
		C := C / 5;
		write_item(C)
		read_item(A)
read_item(A);		
A := A * 3;		
write_item(A);		
read_item(B);		
B := B − 5;		
write_item(B);		
	write_item(A);	
		A := A / 3;
		write_item(A)

T1	T2	Т3
read_item(A);		
		read_item(C);
	read_item(A);	
A := A * 5;		
write_item(A);		
read_item(B);		
B := B – 10;		
write_item(B);		
	A := A + 10	
		C;= C / 10;
		write_item(C)
	write_item(A);	
		read_item(A)
		A := A / 5;
		write_item(A)

	read_item(A);	
	A := A + 10	
	write_item(A);	
read_item(A);		
A := A * 3;		
write_item(A);		
read_item(B);		
B := B − 5;		
write_item(B);		
		read_item(C);
		C := C / 5;
		write_item(C)
		read_item(A)
		A := A / 3;
		write_item(A)

Consider the file **BRANCH**(<u>branch-name</u>, *city*, *assets*), where the primary key is underlined. Suppose that the file is sequential on the primary key. Also, suppose that we have a B+-tree and a hash index on the *city* attribute, and that no other index is available.

⁹ C B+-Tree and Hashing Opt.

What is the best approach among the following methods for implementing:

 $\sigma_{((city = \text{``Lan Kwai Fong"}) \text{ AND } (assets < 5000))}$ (branch)

Select one alternative:

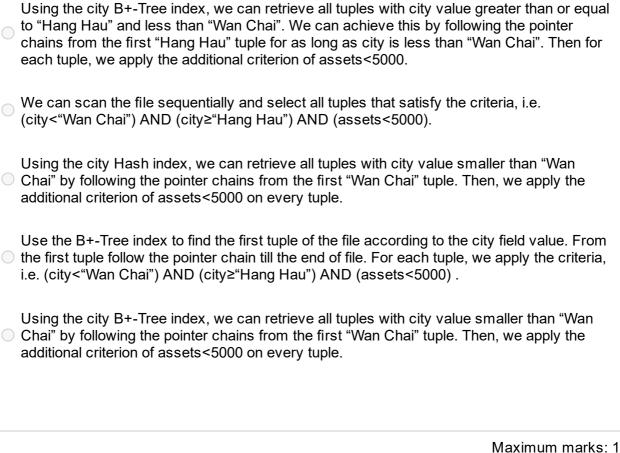

Apply the binary search algorithm on the city field of the file to find the tuple with city="Lan Kwai Fong" and then check if assets<5000.
Use the hash index to find the tuple with city="Lan Kwai Fong" and then check if assets<5000.
Scan the file sequentially and select all tuples with city="Lan Kwai Fong" and assets<5000.
Use the B+-tree index to find the tuple with city="Lan Kwai Fong" and then check if assets<5000.

C B+-Tree and Hashing Opt.

What is the best approach among the following methods for implementing:

σ((city<"Wan Chai") AND (city≥"Hang Hau") AND (assets<5000))(branch)

Select one alternative:

¹¹ C B+-Tree and Hashing Opt.

What is the best approach among the following methods for implementing:

 $\sigma_{((branch-name="HKmain") OR (assets < 5000))}$ (branch)

Sel	lect	one	alte	rna	tive	٠
~			uite	ıııu		

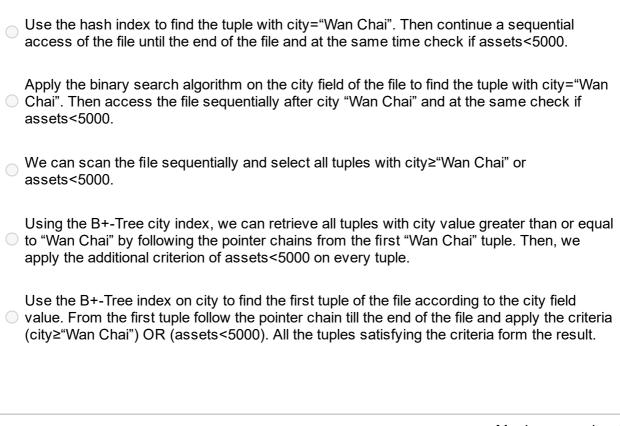

Apply the binary search algorithm on the branch-name field of the file to find the tuple with branch-name="HKmain" and then check if assets<5000.
Use the B+-tree index to find the tuple with branch-name="HKmain" and then check if assets<5000.
Use the hash index to find the tuple with branch-name="HKmain" and then check if assets<5000.
Scan the file sequentially and select all tuples with branch-name="HKmain" or assets<5000.

¹² C B+-Tree and Hashing Opt.

What is the best approach among the following methods for implementing:

σ_{((city≥"Wan Chai") OR (assets<5000))} (branch)

Select one alternative:

¹³ C B+-Tree and Hashing Opt.

What is the best approach among the following methods for implementing:

σ_{((branch-name="HKmain") AND (assets<5000))} (branch)

Select one alternative	one alternativ	e:
------------------------	----------------	----

- Use the hash index to find the tuple with branch-name="HKmain" and then check if assets<5000.
- Use the B+-tree index to find the tuple with branch-name="HKmain" and then check if assets<5000.
- Scan the file sequentially and select all tuples with branch-name="HKmain" and assets<5000.
- Apply the binary search algorithm on the branch-name field of the file to find the tuple with branch-name="HKmain" and then check if assets<5000.

Maximum marks: 1

¹⁴ ♥ C Equivalence Rules

Which of the following choices are correct?

Select one or more alternatives:

- Natural join operations are NOT associative, i.e. $(E_1 \bowtie E_2) \bowtie E_3 \neq E_1 \bowtie (E_2 \bowtie E_3)$
- $\Pi_{t1}(\Pi_{t2}(E)) = \Pi_{t2}(\Pi_{t1}(E))$

¹⁵ C Hashing Files

A STUDENTS file with StudentID as hash key includes records with the following StudentID values: 800, 199, 178, 201, 206, 123, 102, 106, 189, 202, 301, 108, 200, 987, 999, 307, 400. The file uses 8 buckets, numbered 0 to 7. Each bucket is one disk block and holds two records. Load these records into the file in the given order using the hash function h(K)=K mod 8.

Select one alternative:

Bucket 0: {800, 400}	Bucket 0: {800, 200, 400}
Bucket 1: {201}	Bucket 1: {201}
Bucket 2: {178, 202}	Bucket 2: {178, 202, 106}
Bucket 3: {123 307}	Bucket 3: {123, 307, 987}
Bucket 4: {108}	Bucket 4: {108}
Bucket 5: {189, 301}	Bucket 5: {189, 301}
Bucket 6: {206, 102}	Bucket 6: {206, 102}
Bucket 7: {199, 999}	Bucket 7: {199, 999}

Overflow buckets {106, 987, 200}

None of the other answers is correct!

Bucket 0: {800} Bucket 1: {201} Bucket 2: {202} Bucket 3: {307} Bucket 4: {108} Bucket 5: {189} Bucket 6: {206} Bucket 7: {199}

Overflow buckets {102, 106, 178, 301, 200, 987, 999, 123}

¹⁶ ♥ C Consistency

17

Which of the following statements regarding *consistency* are correct.

Select one or more alternatives:
In CAP, the term consistency refers to the consistency of the values in different copies of the same data item in a replicated distributed system.
☐ The consistency in CAP and in ACID refers to the same identical concept.
☐ In CAP, the term consistency refers to the conistency of measurement techniques.
In ACID, the term consistency refers to the fact that a transaction will not violate the integrity constraints specified on the database schema.
Maximum marks: 1
♥ C Heap Files
Consider Heap files. Which of the following statements are correct.
Select one or more alternatives:
■ Inserting a new record is efficient.
■ We can apply the binary search algorithm to search for a record which is reasonably fast.
Deletion techniques: use a deletion marker.
Records are placed in the file in the order of insertion.

18 ♥ C NOSQL

19

Considering NOSQL systems, which of the following statements is correct	Considering NOSQL	systems.	which c	of the	following	statements	is	correct
---	-------------------	----------	---------	--------	-----------	------------	----	---------

Select one or more alternatives:
NOSQL systems support powerful query languages. For instance, they support join operations and enforce referential integrity.
NOSQL supports semi structured, self-descriptive data.
☐ Data must be normalised at least up to 3rd normal form.
Maximum marks: 1
▼ C Sequential files
Consider Sequential files (i.e. where records are sorted by an ordering field). Which of the following statements are correct.
Select one or more alternatives:
Sequential files are suitable for applications that require sequential processing of the entire file (since reading records in order of ordering key value is extremely efficient).
■ We need to reorganize the file periodically to restore sequential order.
Finding the next record is very efficient.
Sequential files are suitable for applications that require very fast search of records, as we can find any record with constant time 1.
Every time we need to insert a new record, we need also to move many records one position, which can be very expensive in time.
Maximum marks: 1

²⁰ C External sort-merge

A file of 4096 blocks is to be sorted with an available buffer space of 64 blocks using the **external sort-merge** algorithm.

During the **sorting phase** (i.e. **Create sorted runs** phase) what is the number of initial runs (n_R) ?

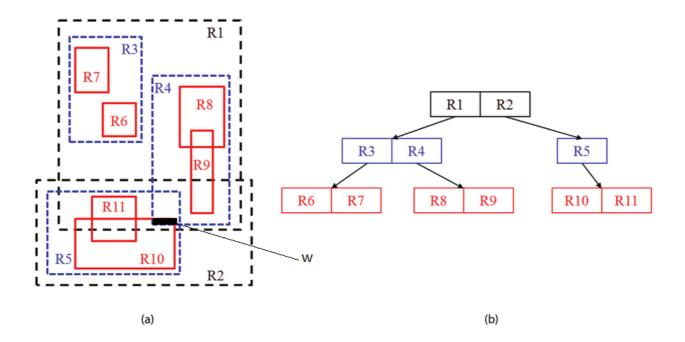

During the **merging phase** (1) what is the degree of merge (d_M) (i.e. the number of sorted subfiles that can be merged in each merge step) and (2) how many merge passes will be needed (mp)?

Calast		-14	-4:
Select	one	aitern	ative:

O None of the other answers is correct!	
○ nR=64, dM=63, mp=2.	
○ nR=112, dM=112, mp=4.	
○ nR=64, dM=64, mp=1.	

²¹ C R-Tree

Consider the following regions (rectangles) and the respective R-Tree. Which R-Tree nodes will be visited while searching for the query window **w**?

Select one alternative:

- R2, R5, R10
- R1, R2, R5, R10
- The R-Tree is wrong, thus all other answers are wrong!
- R1, R4, R2, R5, R10

²² C Selection Cardinality

Consider the file CITIZEN(<u>CID</u>, Sex, City, Assets), where the primary key is underlined. Suppose that the file is sequential on the primary key. Also, suppose that the relation has 1000 citizens, where 10 of the citizens are from the Ayia Napa City and half of the citizens are females. Suppose, we have two B+-Trees indexes, i.e. one on Sex and one on City attributes and that no other index is available.

What is the best approach among the following methods for implementing:

σ((city="Ayia Napa") AND (Sex="Female"))(CITIZEN)

•				4.	
~ O	IDCT.	Ana.	altai	rnative	٠
26	ICLL	ULIC	aitei	Halive	

	Maximum marks: 1
	Scan the file sequentially and select all tuples with female citizens from Ayia Napa.
	Apply the binary search algorithm on the City field of the file to find citizens from Ayia Napa and then check if they are female.
	Using the B+-Tree on City, first select all citizens from Ayia Napa. Then check if they are female.
0	Using the B+-Tree on Sex, first select female citizens and then check if they are from Ayia Napa. Then, using the B+-Tree on City select all citizens from Ayia Napa and then check if they are females.
	Using the B+-Tree on Sex, first select all female citizens and then check if they are from Ayia Napa.

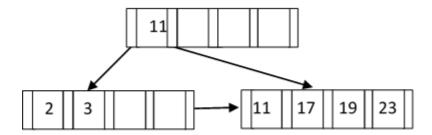

²³ ♥ C R-Tree Th

In the context of R-tree select all correct statements.
(Where MBR is Minimum Bounding Rectangle.)

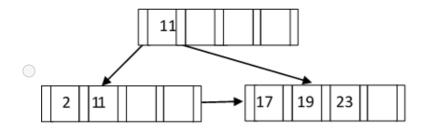

Maximum marks:
■ Minimising dead space inside an MBR improves R-tree efficiency.
For a range search, we need h operations, where h is the height of the tree.
The parent nodes will hold child nodes where child nodes completely overlap the region of parent nodes
Due to space savings, we do not allow MBR overlaps.
R-tree is always a balanced tree

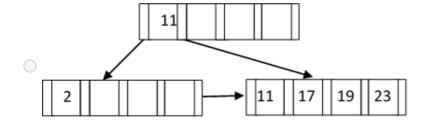

²⁴ C B+-Tree

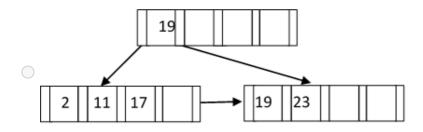

For the B+-tree below, what is the form of the tree after deleting 3?

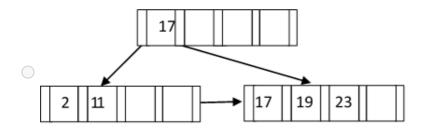

Select one alternative:

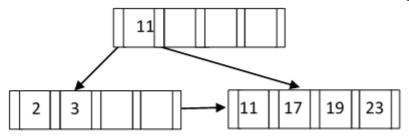

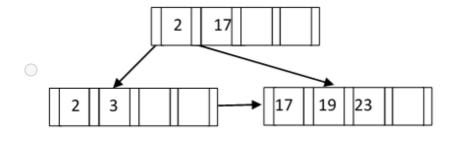

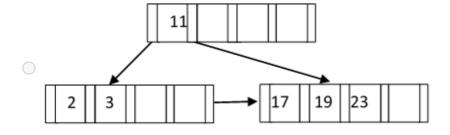

²⁵ C B+-Tree

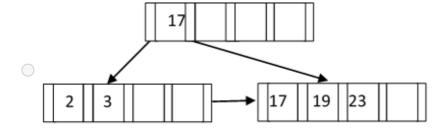

For the B+-tree below, what is the form of the tree after deleting 11?

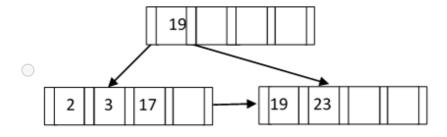

Select one alternative:

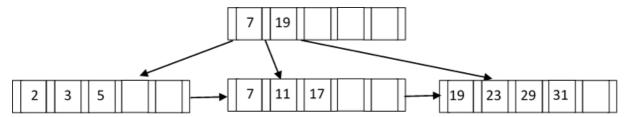

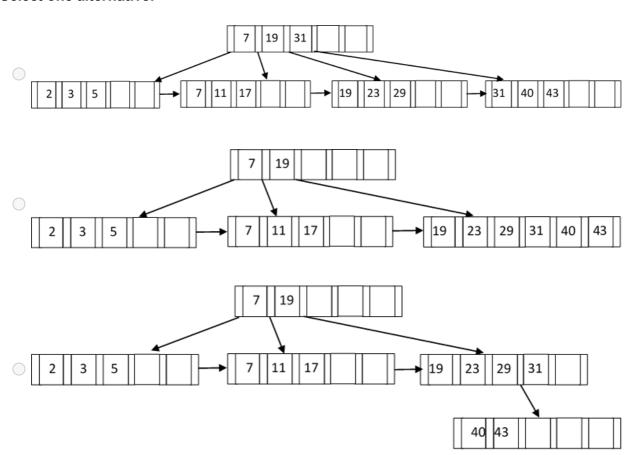

²⁶ C B+-Tree

For the B+-tree below, what is the form of the tree after adding 40 and then 43?

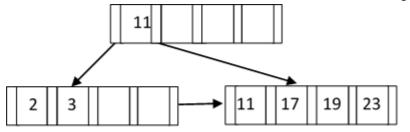

Select one alternative:

²⁷ C B+-Tree

For the B+-tree below, what is the form of the tree after adding 24?

Select one alternative:
