Implemented as a Moore machine with 3 D Elif-Flops.

We can use the method of potentials (Kircloffs' current law) $\frac{5-V_4}{R_1} = \frac{V_4}{R_2} + \frac{V_4}{R_3} + \frac{2-V_4}{R_4} = 0 \quad (=) \quad \frac{1}{10} \left(7 - 4V_4\right) = 0 \quad (=) \quad V_4 = \frac{7}{4}V_4$

$$V_0 = V_{in} + R_2 T$$

$$V_0 = V_{in} + \frac{R_2}{R_1} (V_{in} - V_{r})$$
